

# Qingni Wang

Email: qingni1031@gmail.com    Homepage    Google Scholar

Institution: University of Electronic Science and Technology of China (UESTC)

Status: Master Degree Candidate

## EDUCATION

---

### China University of Mining and Technology (CUMT)

Bachelor's degree in Electronic Information Science and Technology

Sep 2019 — Jun 2023

Average GPA: 3.96/5.00 (Rank 5/97)

### University of Electronic Science and Technology of China (UESTC)

Master's degree in Computer Science and Technology

Sep 2023 — Jun 2026

Average GPA: 3.54/4.00

Supervised by Prof. Bo Fu

## RESEARCH EXPERIENCE

---

### Southern University of Science and Technology (SUSTECH)

Supervised by Prof. Feng Zheng

Jun 2024 — Oct 2024

- **Risk-Controlled Video Question Answering:** Developed a conformal risk-controlled framework for open-ended VideoQA, enabling statistically reliable answer selection and revealing modality-specific uncertainty behaviors when MLLMs are restricted to single-modality inputs. (**ICLR 2025 Spotlight**)
- **Omni-Modal Long Video Understanding:** Introduced LongVALE, the first large-scale benchmark for the understanding of vision-audio-language events with fine-grained temporal boundaries and correlation-aware captions. Built a scalable pipeline for automatic omni-modal annotation and developed LongVALE-trained model, enabling cross-modal reasoning and fine-grained temporal perception in long videos. (**CVPR 2025**)

### University of California, Santa Barbara (UCSB)

Supervised by Prof. Xin Eric Wang

May 2025 — Present

- **Risk-Controlled Reasoning in Large Language Models:** Proposed SAFER, a two-stage conformal framework for risk-constrained open-ended QA. Unlike the prior **Sample then Identify** framework that relies on the assumption that correct answers can always be sampled within a finite space, SAFER introduces explicit abstention and diverse correctness criteria to achieve provable miscoverage control and efficiency across large language models. (**ICLR 2026**)
- **Uncertainty and Risk Control in GUI Grounding:** SafeGround estimates spatial uncertainty and translates it into risk controlled GUI actions with finite-sample FDR guarantees, even under black-box model access. (**Preprint.**)

## RESEARCH INTEREST

---

- Uncertainty Quantification: (1) Conformal Prediction (2) Conformal Risk Control.
- Hallucination in Question Answering (QA) Tasks of Multimodal Large Language Models (MLLMs).
- Trustworthy AI Agents: Risk-Aware Planning and Reliable Task Execution.

My long-term goal is to advance **trustworthy foundation models** (e.g., LLMs, MLLMs, and Agents) that understand and regulate their own uncertainty, achieving trustworthy reasoning and decision-making in complex real-world scenarios.
